Research Experience

Probabilistic analysis of branching processes

May 2020 - present McGill University

Research group

Ongoing research on branching processes, headed by Luc Devroye. Studied estimation problems on Galton-Watson trees. Attended informal seminars over the year, discussing various topics related to branching processes. (Gave a presentation at five of these: one on root estimation in Galton-Watson trees, two on generating functions and elementary analytic combinatorics, and two on graph regularity.) [S1, S3]

Sorting algorithms on manifolds

Summer research project

May – August 2020

McGill University

Research project under the supervision of Michael Lipnowski. Studied algorithms that investigate the topology of group actions on locally symmetric spaces. Work involved writing of code in OCaml and PostScript that generates illustrations of certain quotient spaces, in various models of hyperbolic geometry. [R3]

Interactive proofs

September – December 2019

Honours research project

McGill University

Semester-long research project in the Computation and Logic Group, supervised by Brigitte Pientka. Proved a theorem in constructive logic concerning the formal verification of the interactive proof assistant Harpoon and wrote OCaml code as part of ongoing work on the functional programming language Beluga. [R2]

Bytecode compiler and interpreter

February - June 2019

Individual software project

Charles University

Semester-long individual software project under the supervision of Adam Dingle. Created OPythn, a byte-code compiler and virtual machine for a subset of Python. OPythn includes support for lists, dictionaries, named and anonymous functions, objects, and classes. It is implemented in OCaml using Ocamllex for lexing and Menhir for parsing. [R1]
